

Category:Screen capture software Category:Windows-only softwareQ: "Very soft" vs "Soft" Is "very soft" different from "soft" in any sense or is it the same as "soft"? A: The difference is in the degree of severity. Soft means something too mild or yielding. A soft pillow is nice for a hot night's sleep. But, an "extremely soft" pillow is nice for a warm night's sleep. A similar difference is enjoyed by those who enjoy playing soft music compared to those who enjoy playing intense music. Carbon dioxide laser surgery for macular branch retinal vein occlusion: anatomical and functional results. To report anatomical and functional long-term outcomes of the surgical therapy of macular branch retinal vein occlusion (BRVO). Retrospective, interventional case series. A total of 15 eyes of 10 patients with macular BRVO underwent 25 sessions of pars plana vitrectomy with gas tamponade by means of infusion of 20% perfluoropropane (C3F8). Intraoperative and postoperative anatomic and functional results are reported. The main outcomes are: 1) the anatomical improvement, determined by fluorescein angiography (FA) up to 2 months after the last surgical procedure; 2) the functional improvement, quantified through foveal thickness and visual acuity; and 3) postoperative complications. The anatomical and functional long-term outcomes of macular BRVO after surgery showed a stable postoperative anatomic and functional improvement up to 2 months after the surgery. There was a return to previous visual acuity and retinal thickness in 11 of 12 eyes with complete anatomic success, while in 3 of 6 eyes with partial success, the visual acuity improved by more than two lines. One eye with complete success recovered the initial visual acuity and retinal thickness; instead, 6 of 8 eyes with partial success showed only a slight visual improvement, with an increase in the average retinal thickness of about 38%, in the central vascular area. No significant adverse effects were observed, except for the appearance of a small choroidal detachment after one session in one eye, which was treated with laser photocoagulation. All patients tolerated surgical treatment, and no significant inflammation was observed. Our results demonstrate the effectiveness of pars plana vitrectomy combined with the use of C3F8 to treat macular BRVO.Waldow
